Hey Harrison/Rachael,

Just wanted to update you on my app progress!

So I'm up to testing and cleaning up my code.

Few things I've done today, which was:

- Implement the delete and edit features for the app which allowed the user to delete or edit games in their database.
- Updated the search feature which now gives the ability for users to search for games using specific criteria (e.g. by genre or name, etc).
- Also managed to implement the ability to pick a random game to play!

Unfortunately, I didn't get time to implement the time stamp, but I don't think be putting that feature in since it seems like there's a few bugs I want to sort out before deployment.

For tomorrow, I'll mainly be finalizing and cleaning the code. I'll also be doing some of the automated testing. @Harrison Malone I'll definitely need your help on that one! I'm still not that confident in doing it or what I need to do for it.

I'd imagine I'd be finished with the code by Thursday afternoon, which I'll work on my documentation for it.

Thanks!

Regards,

Christopher Tri

Hi Chris,

Thanks for the update. Look forward to seeing your app tomorrow. Get some rest :)

Cheers,  
Rachael
